

Leading Airline

Improves **Visibility**
& **Automates** Recovery

Challenges

- Improvement in **RTO** for **DR failover** testing which used to take 4-6 hours
- Uniform platform to **manage DR** for all their applications
- Ease of integration with **third party technologies**
- **Maximum protection** for their critical business service.
- Minimize or eliminate impact on **production server**
- **Real time visibility** into the health of the recovery site
- Unified monitoring console to view all applications from a **single window**
- **Reduced dependency** on key SMEs
- DR-Coordination

Solution

- Unified dashboard providing complete and real-time business service visibility and availability, showcasing the production and DR site replication status
- Real-time RPO monitoring of their existing heterogeneous IT environment
- Robust alert mechanism which enabled real-time information and timely decision making
- Easy and streamlined orchestration of Run book
- Authenticated secure execution of the DR failovers - IT Orchestration Engine enabled Single-Click Failover & Failback
- Automated Proactive DR resiliency check and Coordination
- Recovery drill reports enabled as per the regulatory compliance
