Leading Stock Exchange Achieves

4X Faster Execution

Challenges

The client was looking for a robust and reliable Business Service Availability and Process Automation solution which could help address the following challenges:

- ➢ Operational errors due to dependency on human resources and manual recovery strategy
- ➢ Desired real-time Recovery Point Objective (RPO) monitoring of their existing heterogeneous IT environment
- ➢ Desired Recovery Time Objective (RTO) timelines
- ➢ Absence of robust alert mechanism which led to delayed actions and decision making
- ➢ No real-time visibility on Business Service Continuity and Availability

Solution

- ➢ Automation of all types of application related processes, including Command-line, GUI, Windows and Web based operations
- ➢ Single unified dashboard providing complete and real-time business service visibility and availability
- ➢ Real-time application discovery and interdependency mapping
- ➢ Single-Click Failover & Failback
- ➢ Automated Recovery drill reports
- ➢ Parallel workflow execution for multiple applications
- ➢ End-to-end monitoring of jobs; real-time alerts upon any deviations or failures during execution
- ➢ Agentless approach preventing any overhead on the Production and ensuring easy deployment

Benefits to Business

4X Faster Execution of BOD/EOD Processes

Single Click Initiation of Processes

50% Reduction in Cost of Ownership

RTO Reduced to 30 Mins from 300 Mins
